Reproducing or quoting any part of this publication is permitted, provided this publication is accredited as the source. Please refer to the Statistics Singapore Website Terms of Use (<http://www.singstat.gov.sg/terms-of-use>) for more details on the conditions of use of this publication.

Statistical activities conducted by the Singapore Department of Statistics are governed by the provisions of the Statistics Act (Cap. 317). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Chief Statistician. The Act is available in the Department's Website (www.singstat.gov.sg).

PREFACE

Population size, structure and changes have important implications for production, investment and consumption activities as well as community development, social networks and kinship ties. A good understanding of demographic forces and emerging trends is useful for policy makers, planners, businesses and the academia.

The Singapore Department of Statistics compiles, monitors and analyses Singapore's population statistics and indicators in detail. A report on **Population Trends** that puts together different aspects of demographic statistics is released annually. **Population Trends, 2018** is the fourteenth edition of the annual series.

The report comprises five chapters, namely, 'Population', 'Households and Housing', 'Family Formation and Dissolution', 'Fertility' and 'Mortality'. Key definitions and concepts are explained in text boxes in each chapter. Time series of commonly used indicators are included in the Statistical Appendices. Users can also explore the data time series in our e-service SingStat Table Builder at <http://www.singstat.gov.sg/tablebuilder>.

I would like to thank various government agencies for providing the necessary data for the compilation of indicators released in this report. My sincere appreciation is also extended to all others who have contributed to the successful completion of this report.

Wong Wee Kim
Chief Statistician
Singapore

September 2018

Our Vision

National Statistical Service of Quality, Integrity and Expertise

Our Mission

We deliver Insightful Statistics and Trusted Statistical Services that
Empower Decision Making

Our Guiding Principles

- | | |
|--|--|
| Professionalism
& Expertise | <i>We adhere to professional ethics and develop statistical competency to produce quality statistics that comply with international concepts and best practices.</i> |
| Relevance
& Reliability | <i>We produce statistics that users need and trust.</i> |
| Accessibility | <i>We make our statistics readily available through user-friendly platforms.</i> |
| Confidentiality | <i>We protect the confidentiality of information collected by us.</i> |
| Timeliness | <i>We disseminate statistics at the earliest possible date while maintaining data quality.</i> |
| Innovation | <i>We constantly seek ways to improve our processes, leveraging on new technology where feasible, to deliver better products and services to users.</i> |
| Collaboration | <i>We engage users on data needs, data providers and respondents on supply of data, and undertake the role of national statistical coordination.</i> |
| Effectiveness | <i>We optimise resource utilisation, leveraging on administrative and alternative data sources to ease respondent burden.</i> |

* Data refer to Post-Secondary (Non-Tertiary) and Diploma & Professional Qualification.

Notes:

- 1) Total population comprises Singapore residents (i.e. Singapore citizens and permanent residents) and non-residents.
- 2) Data for 1970 and 1980 are based on *de facto* concept (i.e. the person is present in the country when enumerated at the reference period). Data from 1990 onwards are based on *de jure* concept (i.e. the person's place of usual residence).
- 3) Data from 2003 onwards exclude residents who have been away from Singapore for a continuous period of 12 months or longer as at the reference period.
- 4) Prior to 2003, data are based on Singapore's land area as at end-December. From 2003 onwards, data are based on Singapore's land area as at end-June.
- 5) Data refer to resident population.
- 6) Data refer to resident population, except for 1970 which refer to total population.
- 7) Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.
- 8) Data refer to resident households (i.e. households headed by a Singapore citizen or permanent resident), except for 1970 which refer to private households.
- 9) Data include other types of dwelling (e.g. non-HDB shophouses).
- 10) Data include non-privatised Housing and Urban Development Corporation (HUDC) flats.

	67.8	74.7	77.6	80.0	84.0	85.1	85.2 ^P

Notes (cont'd):

11) Data for 2018 are not available.

12) Total marriages comprise civil marriages registered under the Women's Charter and Muslim marriages registered under the Administration of Muslim Law Act. Data exclude civil marriages which were contracted overseas or under religious and customary rites, and were subsequently registered in Singapore in the reference year.

13) Data are based on resident grooms/brides and resident population, except for 1970 and 1980 which are based on total grooms/brides and total population.

14) Data are based on divorces and annulments. From 2004 onwards, data are based on divorces and annulments where the male/female spouses are residents (i.e. Singapore citizens and permanent residents).

15) The Singapore resident population as at June 2003 is used as the standard population which is chosen to fix the age structure to eliminate its effect on mortality trends.

Population Trends

Chapter 1 Population

Population Size and Growth

The Singapore citizen population grew by 1.0 per cent over the previous year to 3.47 million as at end-June 2018 (Table 1.1). Together with the permanent resident population, which remained relatively stable at 0.52 million, Singapore's resident population rose 0.7 per cent to 3.99 million.

The non-resident population remained relatively stable at 1.64 million. Overall, Singapore's total population grew by 0.5 per cent to 5.64 million as at end-June 2018, due to stable growth in the citizen population.

Table 1.1 Singapore Population Size and Growth by Residential Status

Year	Number ('000)					Average Annual Growth ¹ (%)				
	Total Population	Singapore Residents			Non-Residents	Total Population	Singapore Residents			Non-Residents
		Total	Citizens	PRs			Total	Citizens	PRs

2018	5,638.7	3,994.3	3,471.9	522.3	1,644.4	0.5	0.7	1.0	-0.8	-0.1

Notes: (a) '-' denotes nil or negligible.

(b) Data from 2003 onwards exclude residents who have been away from Singapore for a continuous period of 12 months or longer as at the reference period.

¹ For 1990 and 2000, growth rate refers to the annualised change over the last ten years. From 2010 onwards, growth rate refers to the change over the previous year.

² Growth rate is computed using population estimates based on *de facto* concept (i.e. the person is present in the country when enumerated at the reference period).

Population

Total population comprises Singapore residents and non-residents. Resident population comprises Singapore citizens and permanent residents. Non-resident population comprises foreigners who are working, studying or living in Singapore but not granted permanent residence, excluding tourists and short-term visitors.

Singapore's population estimates are compiled using the register-based approach since the *Census of Population 2000*. The basic count and profile of the population are based on a person's place of usual residence i.e. *de jure* concept.

Age Structure

The median age of the resident population continued to rise, reaching 40.8 years as at end-June 2018 from 40.5 years in the previous year (Chart 1.1). Similarly, the proportion of the resident population aged 65 years and over also increased to 13.7 per cent in 2018, compared to 13.0 per cent in 2017.

Chart 1.1 Age Distribution of Resident Population

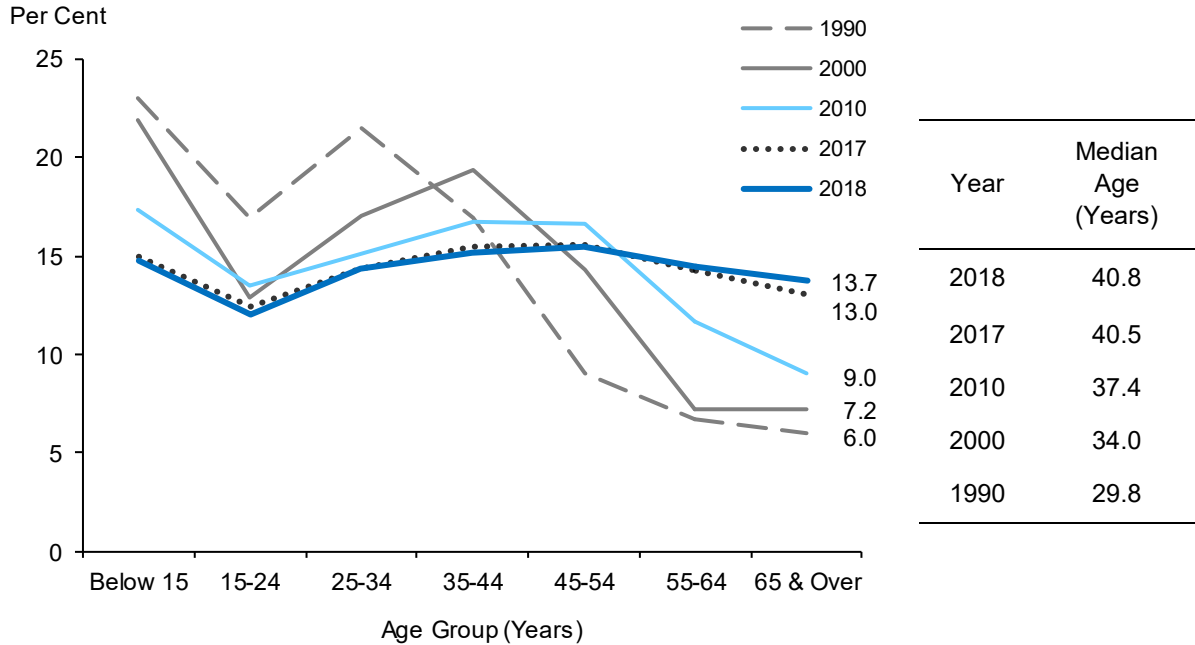

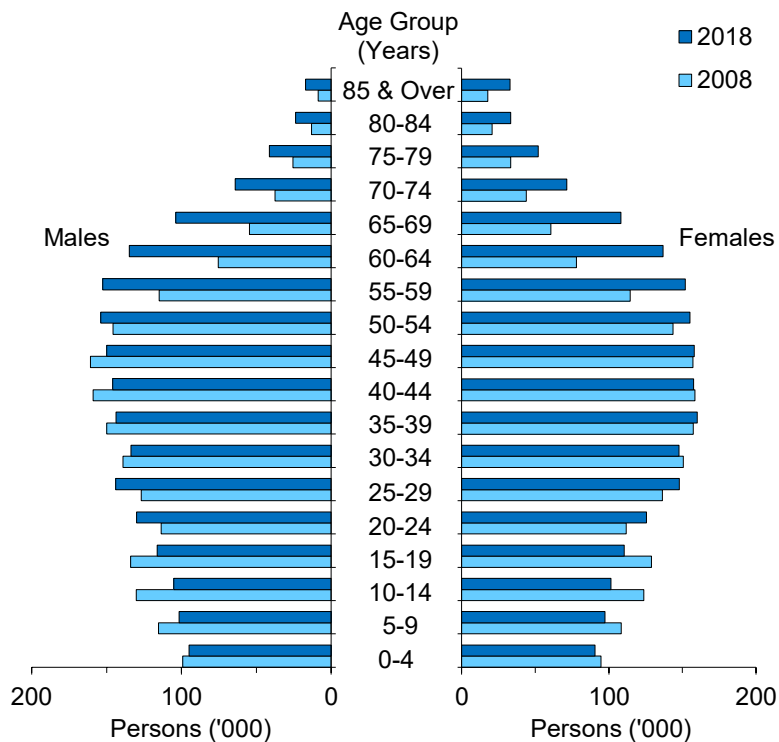

Chart 1.2 Age Pyramid of Resident Population

Old-Age Support Ratio

The old-age support ratio of residents continued to fall. As at end-June 2018, there were 4.8 residents aged 20-64 years for each resident aged 65 years and over, compared to 5.1 in 2017 (Chart 1.3).

Chart 1.3 Resident Old-Age Support Ratio

Note: For 1971-1979, data refer to total population.

Ethnic Composition

As at end-June 2018, Chinese made up 74.3 per cent of the resident population (Chart 1.4). This was followed by Malays at 13.4 per cent, and Indians at 9.0 per cent.

Chart 1.4 Ethnic Composition of Resident Population

Sex Composition

The number of females continued to exceed the males. Among the resident population, there were 959 males per 1,000 females as at end-June 2018 (Chart 1.5).

Chart 1.5 Sex Composition of Resident Population

Marital Status

Compared to a decade ago, the distribution of the resident population aged 15 years and over by marital status remained stable. Those who were married made up the largest group at 60.2 per cent while the singles accounted for 30.9 per cent in 2017, similar to that in 2007 (Chart 1.6). Divorced or separated persons and widowed persons remained a small proportion of the resident population, at 3.6 per cent and 5.4 per cent respectively in 2017.

Compared to males, a larger proportion of females were widowed. This is partially due to the longer life expectancy among females than males. Correspondingly, those who were married or single accounted for smaller shares in the female population than the male population.

Chart 1.6 Marital Status of Resident Population Aged 15 Years and Over by Sex

Marital distribution among the resident population varied across age groups. Those in the younger ages of 20-29 years were predominantly single (Chart 1.7). Conversely, at age 30 years and over, the majority of the resident population were married except for females aged 70 years and over for whom widowed persons formed the largest group.

Chart 1.7 Distribution of Marital Status Among Resident Population by Selected Age Group and Sex

Proportion of Singles

Between 2007 and 2017, the proportion of singles among males and females aged below 40 years rose. In particular, among those aged 25-29 years, 78.8 per cent of males and 64.6 per cent of females in 2017 were single, up from 75.0 per cent and 52.2 per cent respectively in 2007 (Chart 1.8).

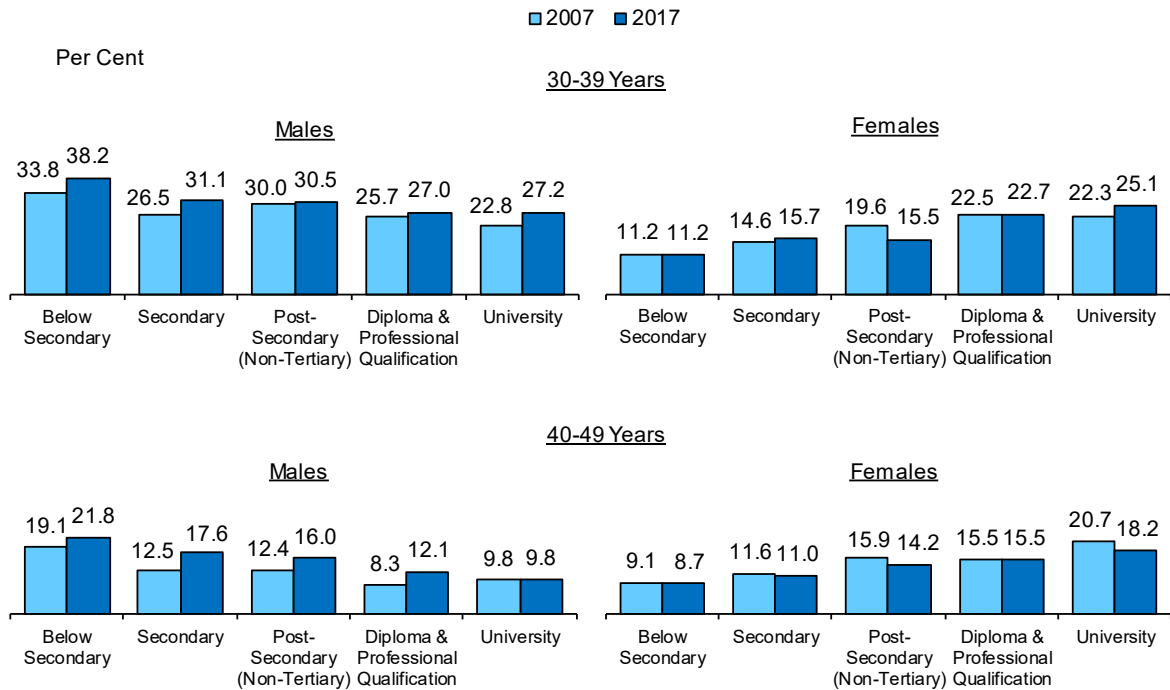

Among those aged 30-34 years, 37.8 per cent of males and 27.7 per cent of females in 2017 were single. For those aged 35-39 years, the corresponding proportions were 20.5 per cent and 17.3 per cent.

Chart 1.8 Proportion of Singles Among Resident Population by Selected Age Group and Sex

Males with lower educational qualifications and females with higher educational qualifications were more likely to be single. In 2017, the proportion of singles among males aged 40-49 years with below secondary qualifications was 21.8 per cent, more than double the 9.8 per cent among those with university qualifications (Chart 1.9). In contrast, the proportion of singles among females aged 40-49 years with below secondary qualifications was 8.7 per cent, less than half of the 18.2 per cent among those with university qualifications.

Chart 1.9 Proportion of Singles Among Resident Population by Selected Age Group, Sex and Highest Qualification Attained

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Education Profile¹

Among resident population aged 25 years and over in 2017, 54.2 per cent had at least post-secondary qualifications, higher than 37.8 per cent in 2007 (Chart 1.10).

This was largely due to the increase in the proportion of university graduates, which rose from 20.1 per cent in 2007 to 30.7 per cent in 2017. Over the same period, the proportion of diploma & professional qualifications also rose slightly, from 11.4 per cent to 14.6 per cent.

Chart 1.10 Highest Qualification Attained of Resident Population Aged 25 Years and Over

¹ Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

The proportion of residents with university qualifications increased between 2007 and 2017 across all age groups (Chart 1.11).

Among residents aged 25-34 years, university graduates constituted 55.3 per cent in 2017, an increase from 40.5 per cent in 2007. For those with diploma & professional qualifications, the proportion remained comparable with 23.7 per cent in 2007 and 23.1 per cent in 2017.

Among those aged 35-44 years, both proportions of university graduates and diploma & professional qualifications holders rose during the same period, with the former rising from 27.9 per cent to 49.2 per cent, and the latter climbing from 14.0 per cent to 21.5 per cent.

Chart 1.11 Highest Qualification Attained of Resident Population Aged 25 Years and Over by Age Group

With a greater proportion of residents attaining higher level of qualifications, the average number of years of schooling has also risen over the past decade, from 9.4 years in 2007 to 10.9 years in 2017 (Chart 1.12).

Chart 1.12 Mean Years of Schooling Among Resident Population Aged 25 Years and Over by Sex

Geographical Distribution

As at end-June 2018, 52.3 per cent of the 3.99 million residents in Singapore were concentrated in the top nine planning areas² (Chart 1.13). There were four planning areas with more than 250,000 residents, namely Bedok, Jurong West, Tampines and Woodlands, with Bedok leading with 281,300 residents.

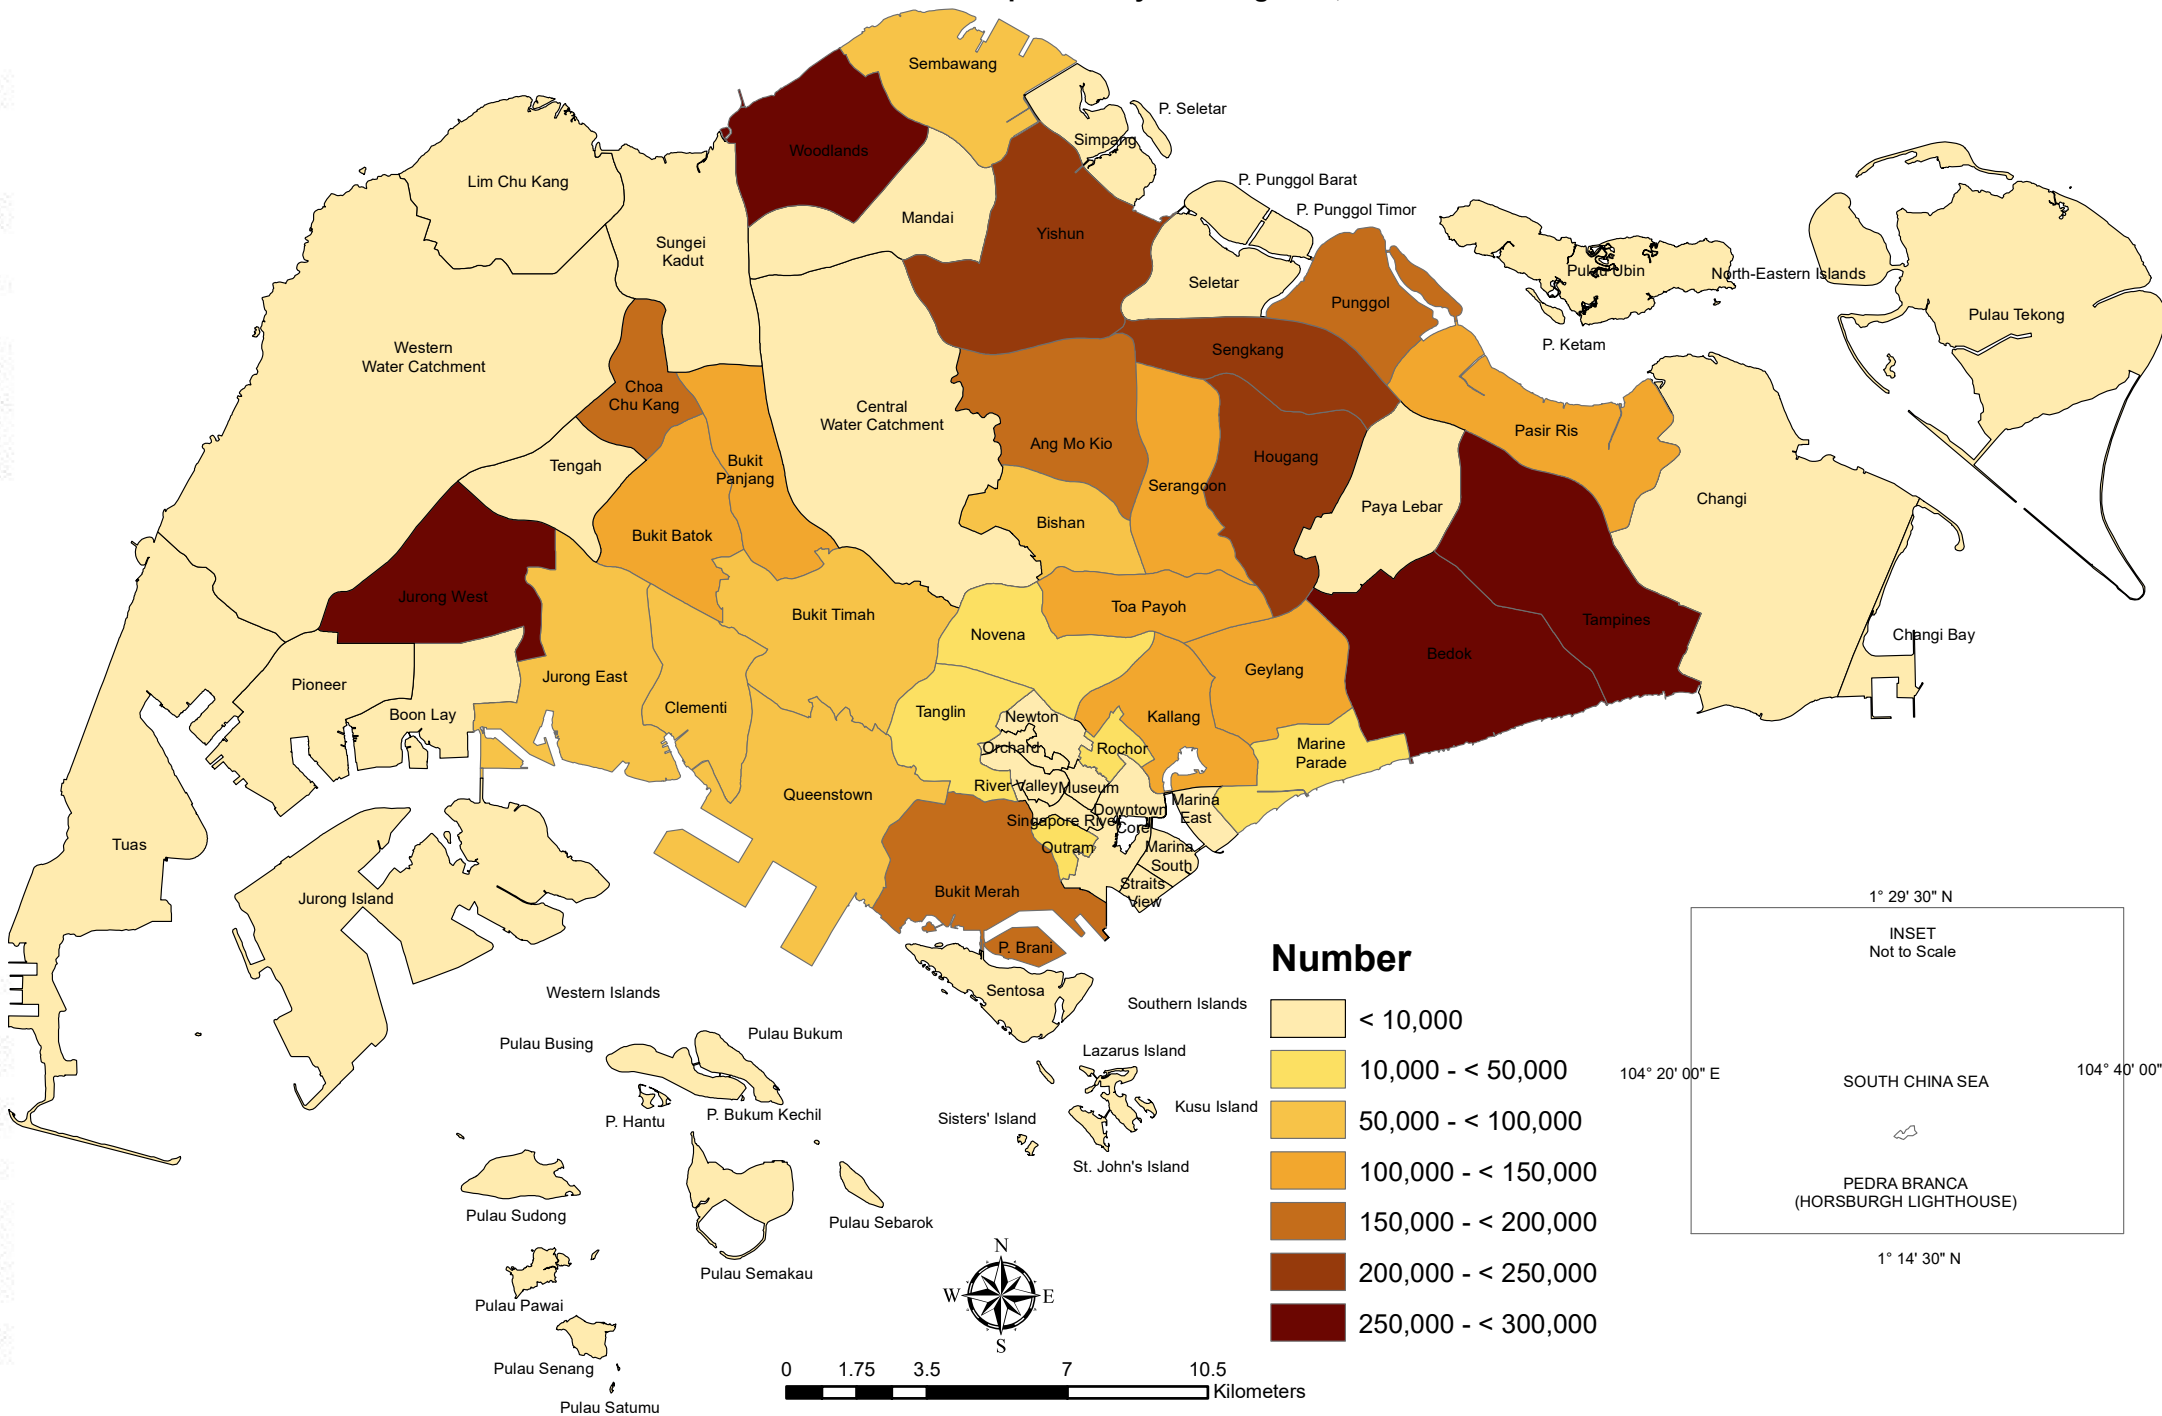

In 2018, Outram, Rochor, Bukit Merah and Sungei Kadut had the highest proportion of residents aged 65 years and over (Chart 1.15). For each of these areas, approximately one in four residents was aged 65 years and over.

In comparison, relatively newer estates were observed to house a higher proportion of children aged below 5 years. In 2018, Punggol had the highest proportion of children aged below 5 years at 10.3 per cent (Chart 1.16). Twelve other planning areas each had the proportion of children aged below 5 years in the range of 5.0 to 9.1 per cent

An estimated 3.15 million residents, or approximately four in five residents, resided in HDB flats in 2018 (Chart 1.17). There were five planning areas where more than 90 per cent of the residents were staying in HDB dwellings. Woodlands ranked first amongst planning areas with the highest proportion of HDB dwellers, followed by Jurong West.

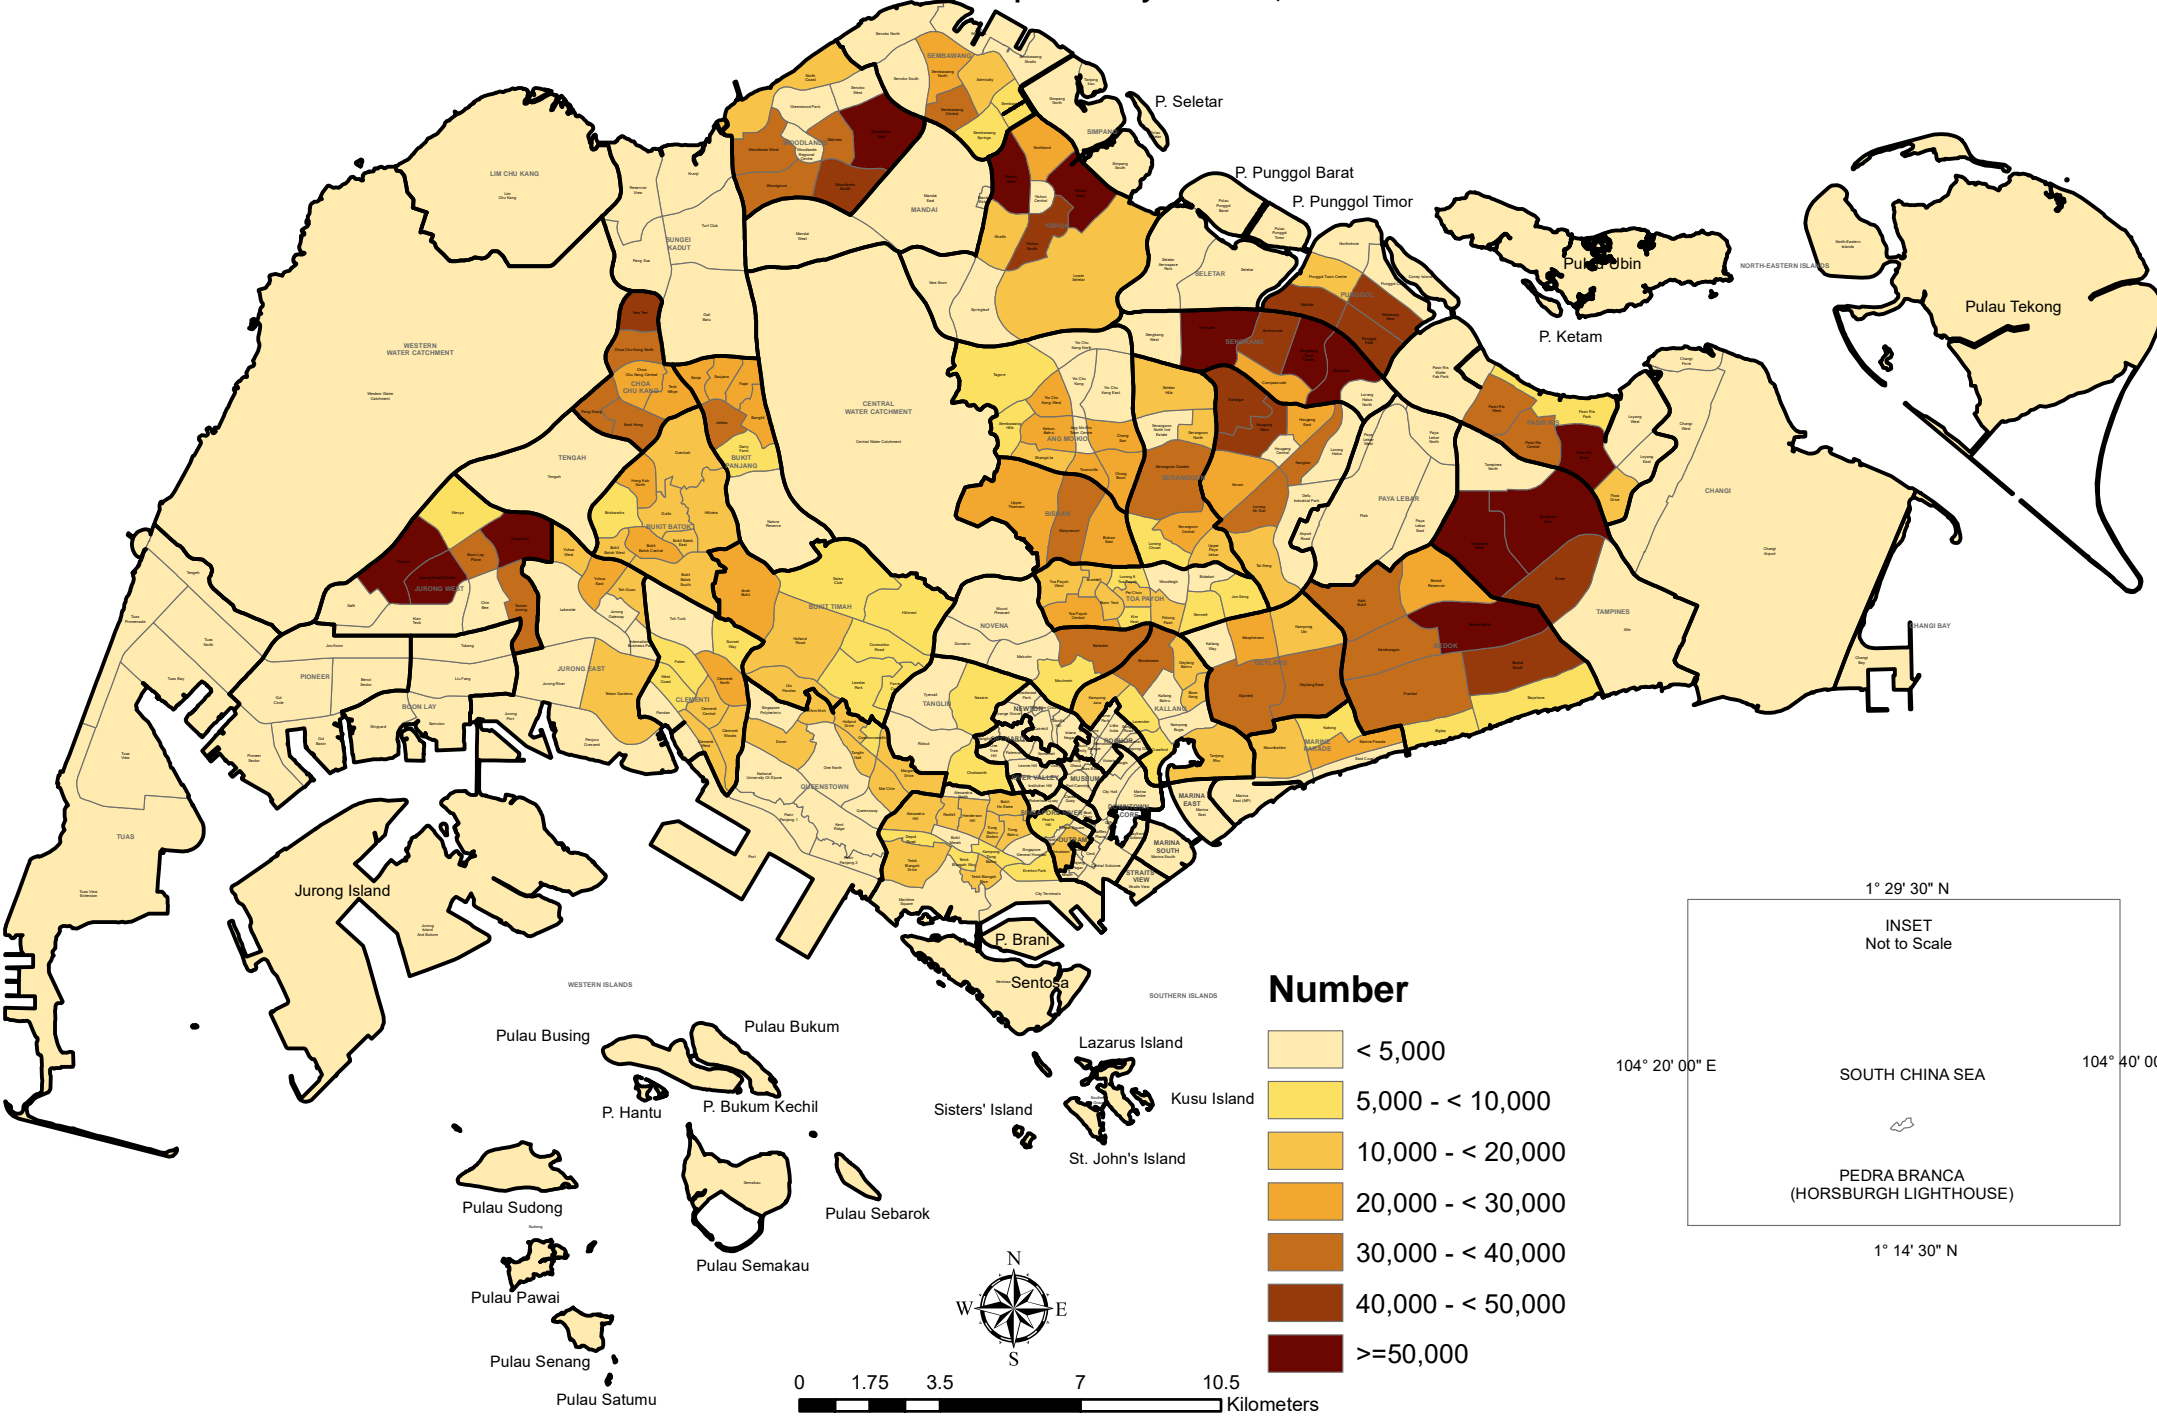

² Planning areas refer to areas demarcated in the Urban Redevelopment Authority's Master Plan 2014.

Chart 1.13 Resident Population by Planning Area, June 2018

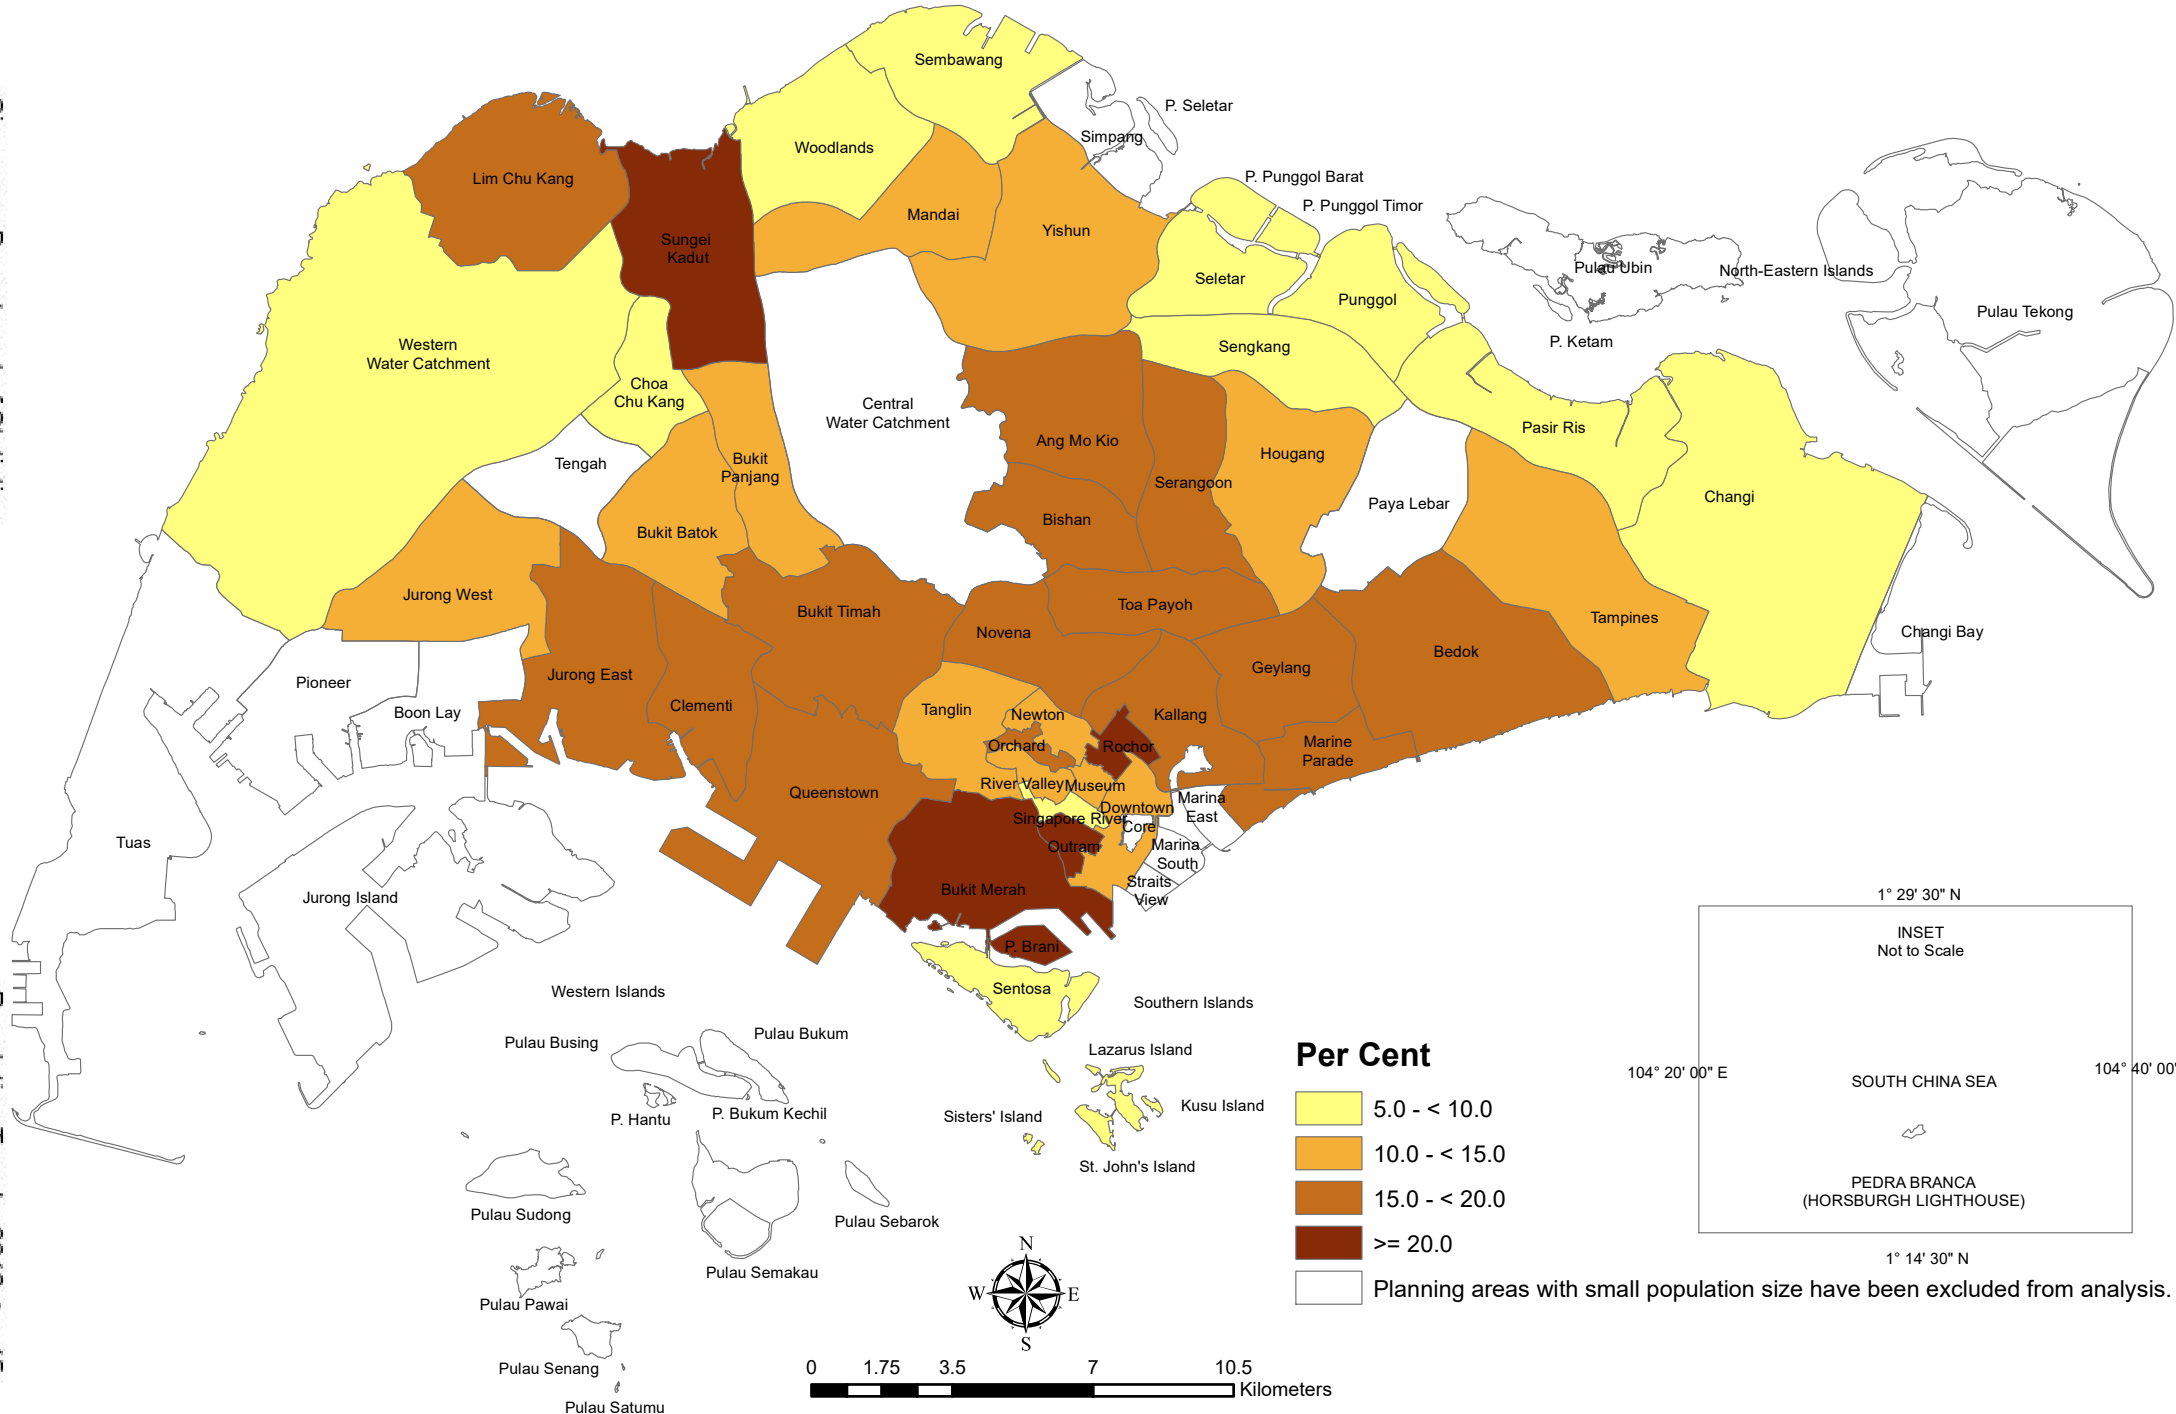

Note: Published map is based on Urban Redevelopment Authority's Master Plan 2014 planning area boundaries and Singapore Land Authority's 2018 Singapore island profile. The Master Plan 2014 is a forward looking guiding plan for Singapore's development in the medium term over the next 10 to 15 years and the planning boundaries may not coincide with existing developments for some areas.

The Master Plan 2014 is a forward looking guiding plan for Singapore's development in the medium term over the next 10 to 15 years and the planning boundaries may not coincide with existing developments for some areas.

Chapter 2 Households and Housing

Resident Households

In 2017, there were 1.29 million resident households, an increase of 2.1 per cent from 2016 (Chart 2.1).

Chart 2.1 Resident Households

Note: '-' denotes nil or negligible.

* For 1990 and 2000, growth rates refer to the annualised change over the last ten years. From 2010 onwards, growth rate refers to the change over the previous year.

Household

A household refers to a group of two or more persons living together in the same house and sharing common food or other arrangements for essential living. It also includes a person living alone or a person living with others but having his own food arrangements. Although persons may be living in the same house, they may not be members of the same household.

A resident household refers to a household headed by a Singapore citizen or permanent resident.

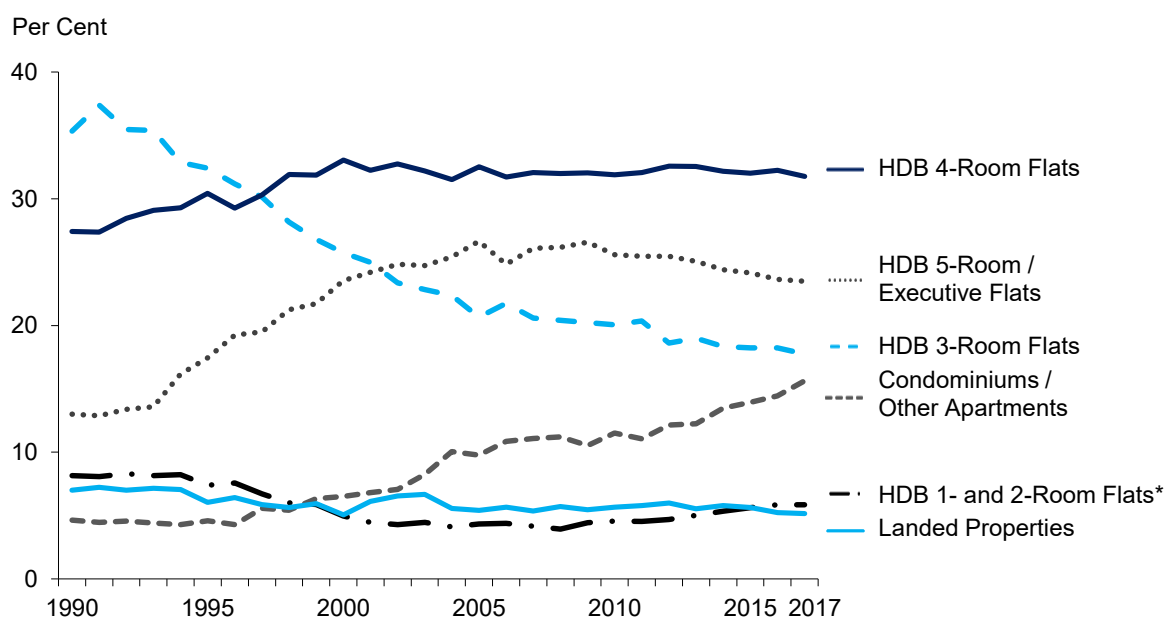

Type of Dwelling

Since two decades ago, the most common type of dwelling among resident households has been the Housing and Development Board (HDB) 4-room flats. In 2017, 31.8 per cent of resident households lived in these flats (Chart 2.2).

Those staying in HDB 5-room & executive flats and HDB 3-room flats, which formed 23.5 per cent and 17.8 per cent respectively in 2017, were the next two largest groups despite gradually trending downwards in the last decade.

Conversely, the proportion living in condominiums & other apartments has been rising steadily over the past two decades, from 5.6 per cent in 1997 to 15.6 per cent in 2017. The proportion living in HDB 1- & 2-room flats and landed properties remained relatively stable, constituting 5.8 per cent and 5.2 per cent respectively in 2017.

Chart 2.2 Proportion of Resident Households by Selected Type of Dwelling

* Includes HDB studio apartments.

Home Ownership

In 2017, 1.17 million resident households owned their homes (Table 2.1). The home ownership rate, which has remained above 90 per cent since 2012, stood at 90.7 per cent in 2017.

Table 2.1 Resident Households by Tenancy of Household

Year	Tenancy ('000)			Home Ownership Rate (%)
	Total*	Owner	Tenant	
1990	661.7	578.9	78.6	87.5
2000	915.1	841.6	63.4	92.0
2010	1,145.9	998.9	132.5	87.2
2011	1,146.2	1,015.9	103.5	88.6
2012	1,152.0	1,038.2	106.8	90.1
2013	1,174.5	1,062.5	105.7	90.5
2014	1,200.0	1,083.4	109.8	90.3
2015	1,225.3	1,112.4	106.2	90.8
2016	1,263.6	1,149.1	107.6	90.9
2017	1,289.9	1,170.2	109.8	90.7

* Includes resident households in dwellings provided free by employers/others.

Tenancy of Household

Tenancy refers to the tenure status of the household with respect to the dwelling in which the household members live.

“Owner” refers to a household where the household head or any other member owns the house.

“Tenant” refers to a household which rents the dwelling or part of it.

Household Size

The average household size among resident households fell from 3.35 persons in 2016 to 3.30 persons in 2017 (Chart 2.3).

Resident households living in landed properties or HDB dwellings with more rooms had larger household size on average. In 2017, the average household size was the largest at 4.29 persons among those staying in landed properties, followed by 3.77 persons for those staying in HDB 5-room & executive flats. Conversely, household size was the smallest at 2.19 persons on average for those living in HDB 1- & 2-room flats.

Chart 2.3 Average Household Size of Resident Households by Selected Type of Dwelling

[^] Includes non-privatised Housing and Urban Development Corporation (HUDC) flats and other types of dwelling (e.g. non-HDB shophouses).

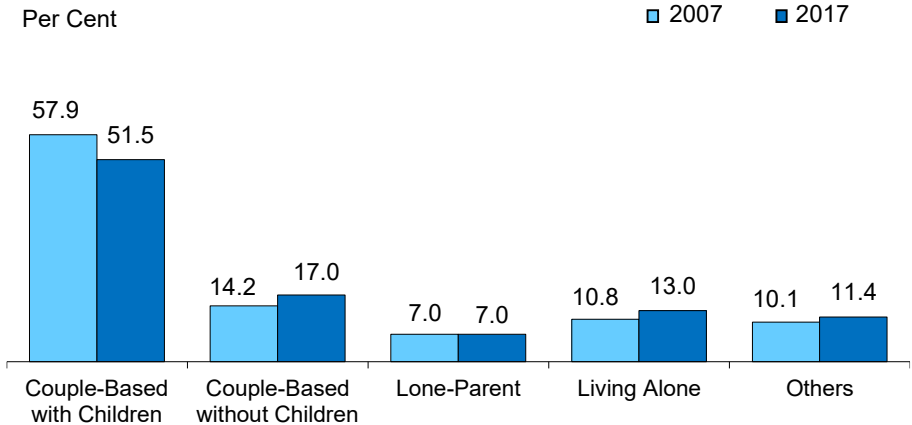

* Includes HDB studio apartments.

Household Living Arrangement

Couple-based with children households constituted more than half of all resident households, although the proportion of such households declined from 57.9 per cent in 2007 to 51.5 per cent in 2017 (Chart 2.4).

In contrast, the proportion rose for couple-based households without children (from 14.2 per cent to 17.0 per cent) and one-person households (from 10.8 per cent to 13.0 per cent) over the past decade.

Chart 2.4 Resident Households by Household Living Arrangement

Household Living Arrangement

Couple-based households refer to households with a married head and spouse. This category is further split into those living with children and without children.

Lone-parent households refer to households whose head is never-married/widowed/divorced/separated and living with children aged below 16 years or never-married children.

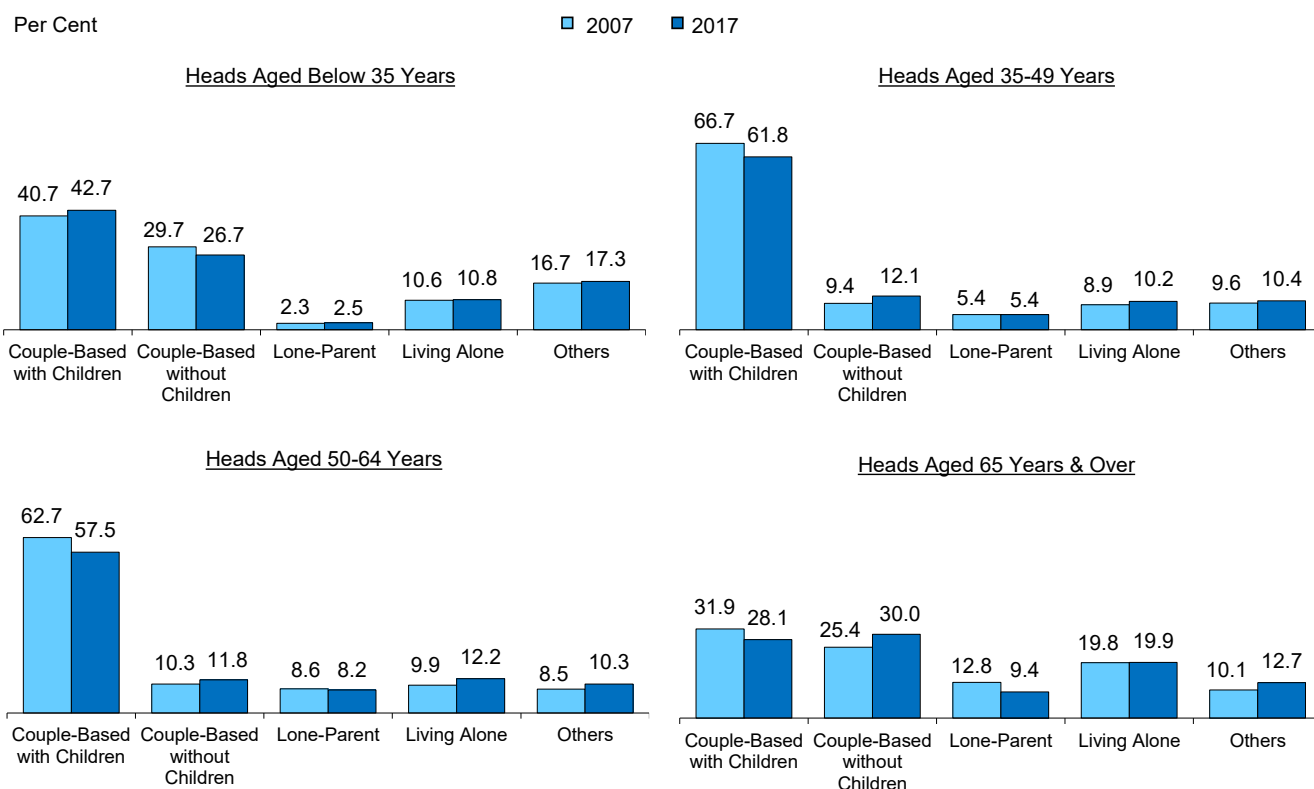

Living alone households refer to one-person households. These include ever-married persons who are living alone as their children have grown up and moved out from the parental home.

As household members go through the different stages of the life cycle, households may transit from one living arrangement to another. Household living arrangement varies distinctly by age group of the household head.

In 2017, couple-based households with children were most prevalent among households with heads aged 35-49 years (61.8 per cent), followed by those aged 50-64 years (57.5 per cent) (Chart 2.5). This reflects the life cycle stages at which married couples set up families and raise children.

There were proportionally more couple-based without children, lone-parent and one-person households among elderly heads aged 65 years and over compared to their younger counterparts. This trend corresponds to the life cycle stage of grown up children leaving their parental homes or the passing away of one spouse, leaving the other behind.

Chart 2.5 Resident Households by Age Group of Head and Household Living Arrangement

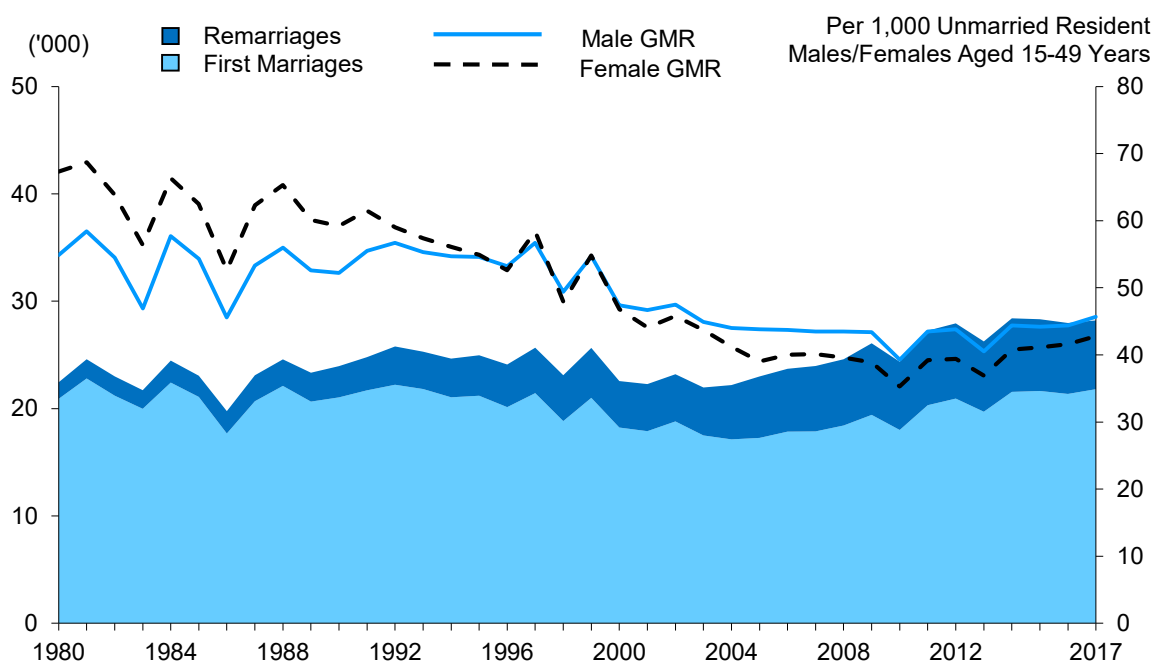

Chapter 3 Family Formation and Dissolution

Marriages

There were a total of 28,212 marriages registered in 2017, up by 0.9 per cent from the 27,971 in 2016 (Chart 3.1). Marriages involving both a first-time groom and a first-time bride accounted for more than three-quarters of all marriages in 2017.

Chart 3.1 Total Marriages and General Marriage Rate (GMR)

Note: Prior to 1984, data on GMR are based on total grooms/brides and total population comprising residents (i.e. Singapore citizens and permanent residents) and non-residents. Data from 1984 onwards are based on resident grooms/brides and resident population.

Total Marriages and Divorces

Statistics on marriages comprise civil marriages registered under the Women's Charter and Muslim marriages registered under the Administration of Muslim Law Act. They are obtained from records maintained by the Registry of Marriages and the Registry of Muslim Marriages.

Statistics on divorces and annulments are obtained from records maintained by the Family Justice Courts and Syariah Court. The records on revocation of divorces are obtained from the Registry of Muslim Marriages. Separations that do not confer on the parties the right to remarry are not covered.

More details on marriages and divorces are available in the publication "Statistics on Marriages and Divorces, 2017".

The general marriage rate rose in 2017. For males, the rate increased from 44.4 marriages per 1,000 unmarried males aged 15-49 years in 2016 to 45.7 marriages in 2017. Similarly, for females, the rate rose from 41.6 marriages per 1,000 unmarried females aged 15-49 years to 42.8 over the same period.

General Marriage Rate

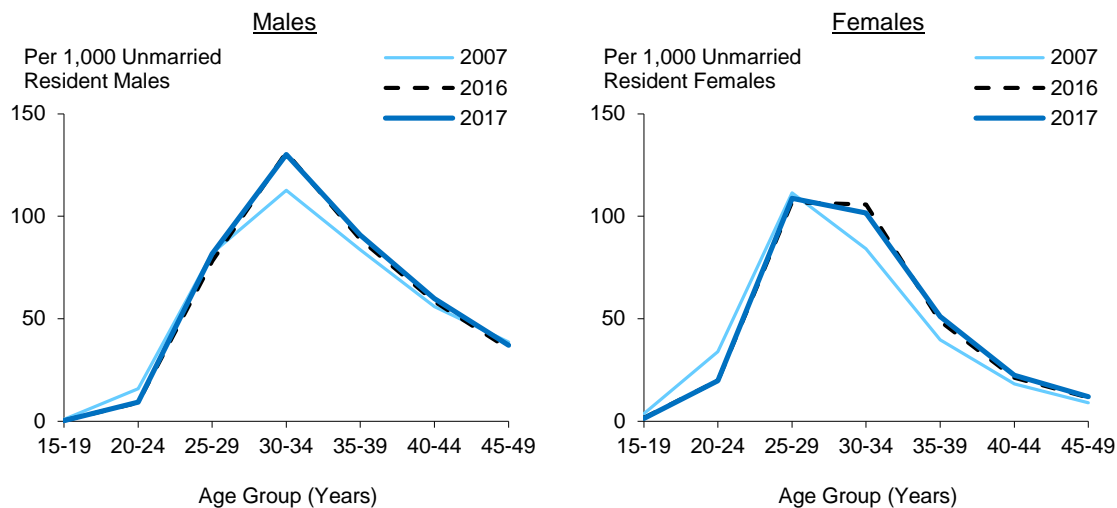

The rate is defined as the number of marriages registered among persons aged 15-49 years during the year, out of every thousand unmarried population in the same age group.

Age-Specific Marriage Rate

Marriage rates in 2017 were similar across all age groups compared to 2016 (Chart 3.2).

Compared to a decade ago, the marriage rates for the younger age groups below 30 years fell, while those aged 30 years and over generally rose. The largest increase in marriage rates between 2007 and 2017 were for males and females aged 30-34 years. The marriage rates for males were the highest among those aged 30-34 years. For females, they were the highest among those aged 25-29 years, followed closely by those aged 30-34 years.

Chart 3.2 Age-Sex Specific Marriage Rate

Age-Specific Marriage Rate

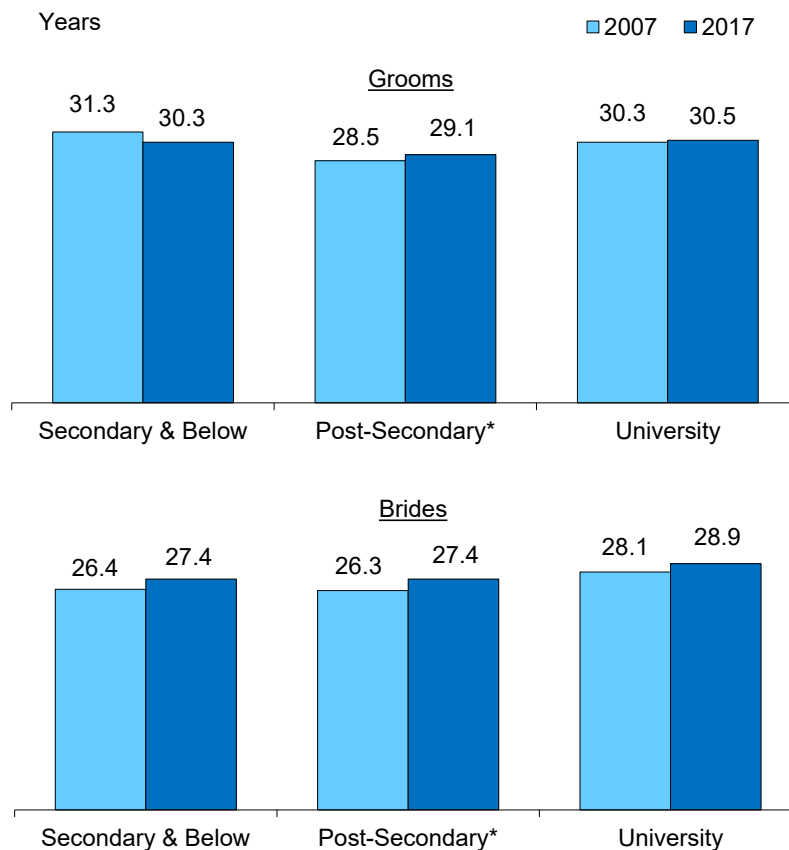

It is defined as the number of marriages registered within a specific age group during the year, out of every thousand unmarried population in the same age group.

Median Age at First Marriage

Compared to 2007, the median age at first marriage for brides in 2017 was higher across all educational groups (Chart 3.3). For grooms, the median age at first marriage was lower for those with secondary & below qualifications.

The median age at first marriage was the highest for both grooms and brides with university qualifications at 30.5 years and 28.9 years respectively in 2017.

Chart 3.3 Median Age at First Marriage of Grooms and Brides by Educational Qualification

* Post-Secondary comprises Post-Secondary (Non-Tertiary) and Diploma & Professional Qualification.

Marital Dissolutions

In 2017, a total of 7,578 marriages ended in a divorce or an annulment (Chart 3.4). This was 0.5 per cent lower than the 7,614 marital dissolutions in the previous year.

In tandem with the fewer marital dissolutions, the general divorce rate fell in 2017. There were 6.9 male divorcees per 1,000 married male residents aged 20 years and over in 2017, lower than the rate of 7.1 in 2016. Similarly the rate for females fell to 6.5 per 1,000 married female residents aged 20 years in 2017, from 6.6 in the previous year.

Chart 3.4 Total Marital Dissolutions and General Divorce Rate (GDR)

Note: Data on GDR include annulments. From 2004 onwards, data on GDR are based on divorces and annulments where either or both spouses are residents (i.e. Singapore citizens or permanent residents).

General Divorce Rate

The rate is defined as the number of divorces and annulments granted to married persons aged 20 years and over during the year, out of every thousand married population in the same age group.

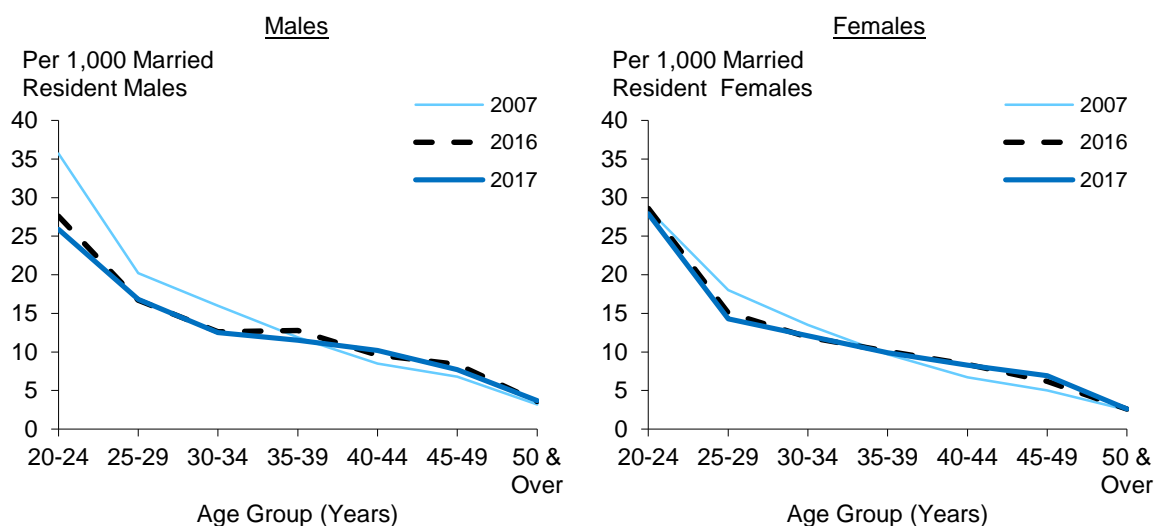

Annulment

This refers to the invalidation of a marriage. Parties whose marriages have been annulled are conferred the status of never having been married to each other.

Age-Specific Divorce Rate

The divorce rates among married males and females in 2017 were largely comparable with 2016 (Chart 3.5). In general, the incidence of marriage dissolutions continued to be higher for married persons in the younger age groups than older age groups. However, between 2007 and 2017, divorce rates declined for the younger age groups, especially for males aged below 35 years.

Chart 3.5 Age-Sex Specific Divorce Rate

Age-Specific Divorce Rate

It is defined as the number of divorces and annulments granted to a specific age group during the year, out of every thousand married population in the same age group.

Marriage Duration of Divorcing Couples

Couples were staying married for longer duration. The median marriage duration of divorces rose to 10.3 years in 2017, from 9.6 years in 2007. While couples with marriage duration of 5 to 9 years constituted the largest share of divorces, its share fell from 34.7 per cent in 2007 to 30.2 per cent in 2017 (Chart 3.6). In contrast, those with marriage duration of 15 years or longer grew in proportion over the same period.

Chart 3.6 Divorces by Duration of Marriage

Note: Data exclude annulments.

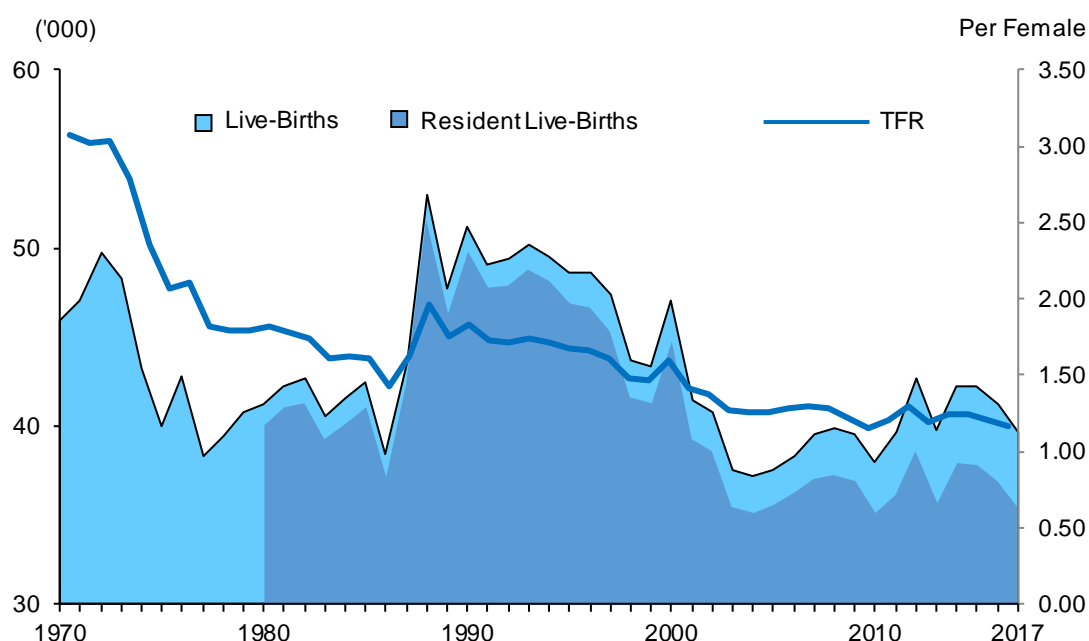

Chapter 4 Fertility

Births and Fertility Rate

The number of live-births totalled 39,615 in 2017, down 4.0 per cent from the 41,251 in 2016 (Chart 4.1). Similarly, the number of resident births (i.e. births with at least one parent who is a Singapore citizen or permanent resident) also declined, from 36,875 in 2016 to 35,444 in 2017.

Singapore's resident total fertility rate (TFR) was 1.16 births per female in 2017, down from 1.20 in the previous year.

Chart 4.1 Total Live-Births and Total Fertility Rate (TFR)

Note: Prior to 1980, data on TFR pertain to total population. From 1980 onwards, data on TFR pertain to resident population (i.e. Singapore citizens and permanent residents). Data on resident births for 1980-1985 are estimated.

Live-Births

Statistics on live-births are obtained from records maintained by the Registry of Births and Deaths. The statistics refer to all live-births occurring within Singapore and its territorial waters as registered under the Registration of Births and Deaths Act (Chapter 267), and are compiled based on date of occurrence.

Total Fertility Rate

The rate refers to the average number of live-births each female would have during her reproductive years if she were subject to the prevailing age-specific fertility rates in the population in a given year.

Ethnic Differentials in Fertility

Compared to 2016, the resident TFR in 2017 increased for the Malays but fell for the Chinese and Indians (Chart 4.2). The TFR remained the highest for the Malays at 1.82 births per female in 2017, followed by 1.01 for the Chinese and 1.00 for the Indians.

Chart 4.2 Total Fertility Rate by Ethnic Group

* Includes the ethnic group "Others".

Age-Specific Fertility Rate

Resident fertility rates for females in 2017 remained largely similar to 2016 across all age groups (Chart 4.3).

Compared to 2007, age-specific fertility rates fell for those aged below 35 years in 2017, and rose for those aged 35 years and over. Fertility rate has been the highest among females aged 30-34 years compared to the other age groups since 2002.

Chart 4.3 Age-Specific Fertility Rate

Births by Birth Order

First order births made up the largest proportion of total live-births in 2017 at 46.9 per cent (Chart 4.4). This was followed by second order births at 35.9 per cent. Third and higher order births constituted the remaining 17.3 per cent in 2017. The proportion of third and higher order births generally trended downwards for the past two decades.

Chart 4.4 Proportion of Births by Birth Order

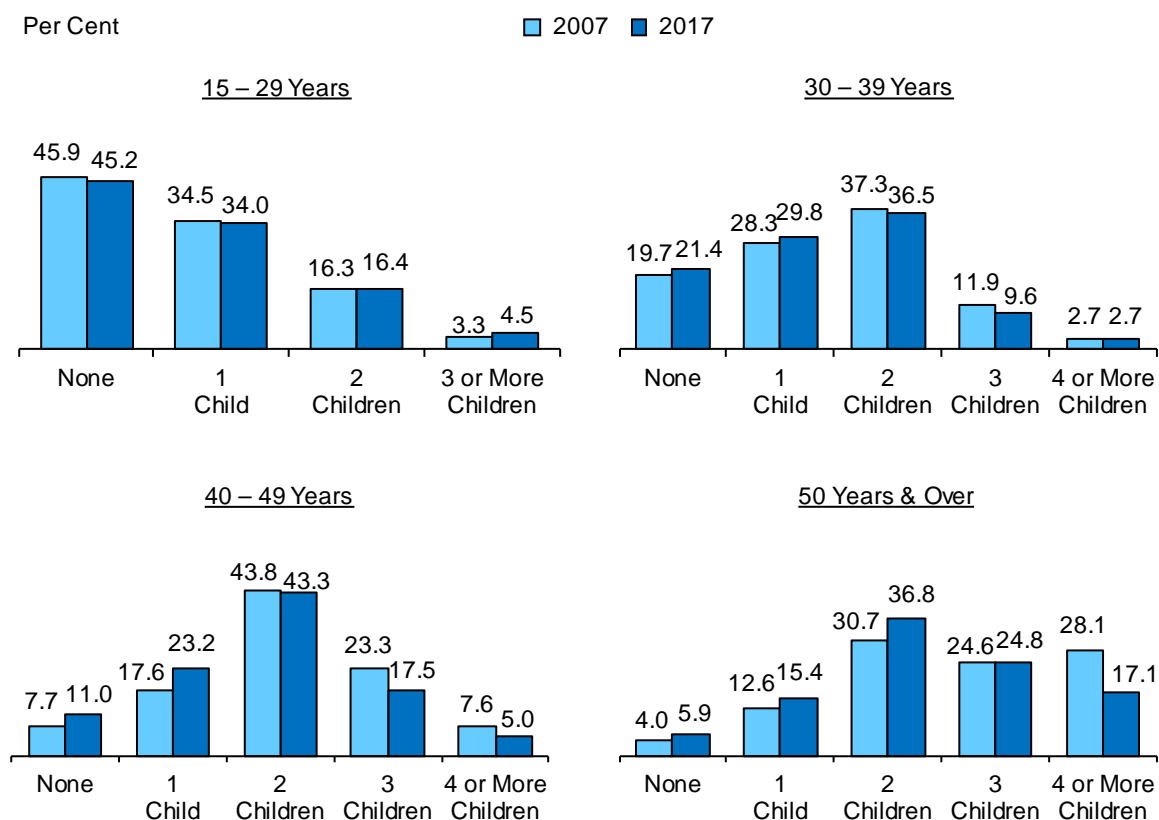

Number of Children Born

Among ever-married resident females aged 30 years and over in 2017, mothers with two children formed the largest group. Specifically, 36.5 per cent of those aged 30-39 years and 43.3 per cent of those aged 40-49 years had given birth to two children (Chart 4.5).

In general, the proportion with three or more children saw a decline over the last decade. Among ever-married resident females aged 40-49 years who were more likely to have completed child-bearing, those with three children decreased from 23.3 per cent in 2007 to 17.5 per cent in 2017. Similarly, those with four or more children decreased from 7.6 per cent to 5.0 per cent over the same period.

Chart 4.5 Resident Ever-Married Females by Age Group and Number of Children Born

Average Number of Children Born by Age Group of Females

The average number of children born to resident ever-married females aged 40-49 years fell from 2.07 in 2007 to 1.84 in 2017 (Chart 4.6).

Chart 4.6 Average Number of Children Born by Age Group of Resident Ever-Married Females

Average Number of Children Born by Educational Attainment of Females

Females with higher educational qualifications generally had fewer children than those with lower qualifications (Chart 4.7). Among resident ever-married females aged 40-49 years, those with below secondary qualifications had 2.06 children on average in 2017 as compared to around 1.73 to 1.74 children for their counterparts with diploma & professional qualifications or university degrees.

Chart 4.7 Average Number of Children Born to Resident Ever-Married Females Aged 40-49 Years by Highest Qualification Attained

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Chapter 5 Mortality

Deaths and Death Rates

Total deaths continued to rise in number from 20,017 in 2016 to 20,905 in 2017 as the population aged (Chart 5.1). The resident crude death rate also rose to 5.0 deaths per 1,000 residents, from 4.8 deaths in the previous year.

The resident age-standardised death rate³, which takes into account the population age structure, remained at 3.0 deaths in both 2016 and 2017. The age-standardised death rate had exhibited a downtrend since 1970, in line with the improvement in health and mortality.

Chart 5.1 Total Deaths, Crude Death Rate and Age-Standardised Death Rate

Note: From 1980 onwards, data on crude death rate and age-standardised death rate pertain to resident population (i.e. Singapore citizens and permanent residents).

Deaths and Death Rates

Statistics on deaths are obtained from records maintained by the Registry of Births and Deaths. The statistics refer to all deaths occurring within Singapore and its territorial waters as registered under the Registration of Births and Deaths Act (Chapter 267), and are compiled based on date of registration.

Crude death rate refers to the number of deaths per thousand population. Age-standardised death rate is another summary indicator of mortality that removes effects of age structure variations in the population over time.

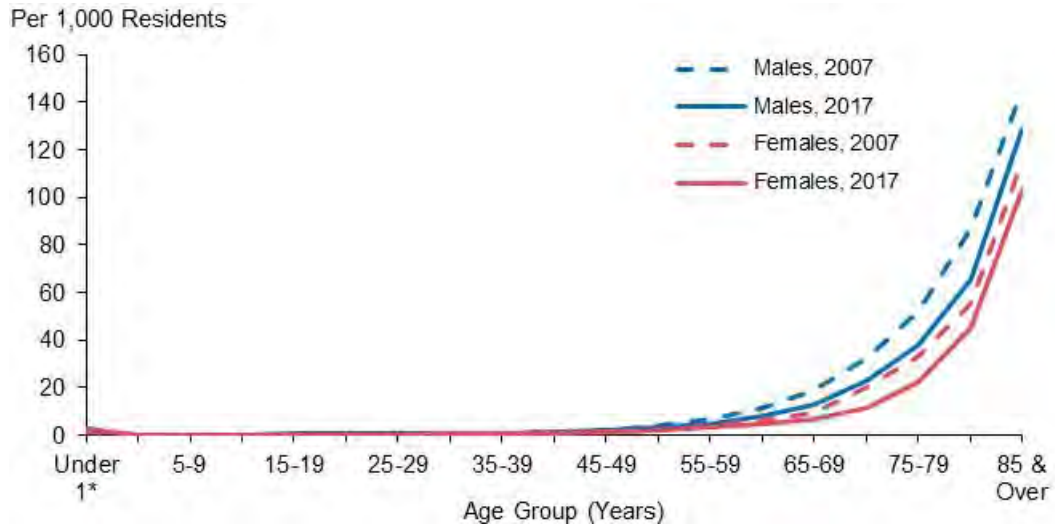

More details on death rates are available in the article "Age-Standardised Death Rate for Singapore" in the Statistics Singapore Newsletter, September 2015.

³ The Singapore resident population as at June 2003 is used as the standard population which is chosen to fix the age structure to eliminate its effect on mortality trends.

Age-Specific Death Rate

Age-specific death rates were lower for most age groups in 2017 for both resident males and females as compared to a decade ago (Chart 5.2). Resident females had lower death rates than resident males in general.

Chart 5.2 Age-Specific Death Rate

* Refers to infant mortality rate.

Infant Mortality Rate

The infant mortality rate ranged from 1.7 to 2.4 infant deaths per 1,000 resident live-births in the last decade and was 2.2 infant deaths in 2017 (Chart 5.3).

Chart 5.3 Infant Mortality Rate

Note: From 1980 onwards, data on infant mortality rate pertain to resident population (i.e. Singapore citizens and permanent residents).

Infant Mortality Rate

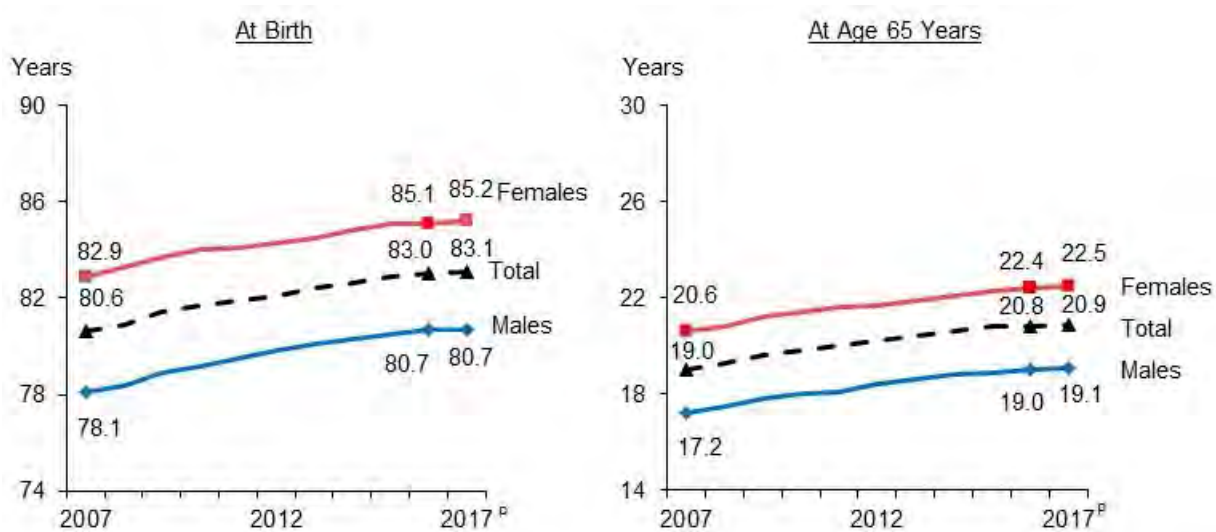

The rate refers to the number of deaths of children under one year of age per thousand live-births. Along with life expectancy, it is one of the most widely used indicators of the population's health status.

Life Expectancy

Singapore residents could expect to live longer compared to a decade ago. The life expectancy at birth in 2017 was 83.1 years, higher than 80.6 years in 2007 and 83.0 years in 2016 (Chart 5.4). Females continued to have longer life expectancy than the males. A new-born girl in 2017 could expect to live an average of 85.2 years, longer than 80.7 years for a baby boy born in the same year.

Similarly, life expectancy at age 65 years also improved, from 19.0 years in 2007 to 20.9 years in 2017. The life expectancy at age 65 years was 19.1 years for resident males and 22.5 years for resident females in 2017.

Chart 5.4 Life Expectancy of Resident Population

Life Expectancy

It refers to the average number of additional years which a person at a specific age (such as at birth or age 65 years) could expect to live, if he or she were to experience the age-specific mortality rates of the reference period throughout his/her life. It does not take into account future changes in mortality. The life expectancy gives an indication of the average longevity of the population, but does not necessarily reflect the longevity of an individual.

This single indicator is commonly used to sum up the mortality experience of a population, taking into account the population's age and sex structure.

More details on life expectancy are available in the publication "Complete Life Tables for Singapore Resident Population, 2016-2017".

Statistical Appendices

Table A1.1 Population, 1871 – 2018

Note: Data on population from 2003 onwards exclude residents who have been away from Singapore for a continuous period of 12 months or longer as at the reference period.

¹ Census of Population. Data for 1980 and earlier Censuses are based on *de facto* concept (i.e. the person is present in the country when enumerated at the reference period). Data for 1990 onwards are based on *de jure* concept (i.e. the person's place of usual residence).

² For 1871-1980 and 1990, data refer to annualised growth rates over the previous Census year.

³ Prior to 2003, data are based on Singapore's land area as at end-December. From 2003 onwards, data are based on Singapore's land area as at end-June.

⁴ From 1970 onwards, data refer to resident population.

⁵ Growth rate is computed using population estimates based on *de facto* concept (i.e. the person is present in the country when enumerated at the reference period).

⁶ Based on 2003 unrevised population.

2017	97.2	98.8	95.7	10.9	11.3	10.4

¹ Among residents aged 15 years and over. Data for 1990, 2000, 2010 and 2015 are from the Population Censuses / General Household Survey. Data for 2013 were revised in March 2017 due to availability of more data sources. Literacy rate refers to the proportion of population who are able to read with understanding (e.g. a newspaper). It is derived based on information as reported in surveys, including the Population Censuses and General Household Surveys, as well as administrative data. Persons whose literacy is not known from surveys or administrative records are excluded from the computation of literacy rate.

² Among residents aged 25 years and over who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

¹ Refers to households with a married head and spouse living with children.

² Refers to households with a married head and spouse not living with children. This includes households whereby children of the head have grown up and moved out from the parental home.

³ Refers to households whose head is never-married/widowed/divorced/separated and living with children aged below 16 years or never-married children.

⁴ Refers to one-person households. This includes ever-married persons who are living alone as their children have grown up and moved out from the parental home.

¹ Refers to households with a married head and spouse living with children.

² Refers to households with a married head and spouse not living with children. This includes households whereby children of the head have grown up and moved out from the parental home.

³ Refers to households whose head is never-married/widowed/divorced/separated and living with children aged below 16 years or never-married children.

⁴ Refers to one-person households. This includes ever-married persons who are living alone as their children have grown up and moved out from the parental home.

Note: Data refer to civil marriages registered under the Women's Charter and Muslim marriages registered under the Administration of Muslim Law Act. Civil marriages which were contracted overseas or under religious and customary rites, and were subsequently registered in Singapore in the reference year are excluded.

¹ Total in 2008 includes marriages where the previous marital status of grooms was not reported.

² Data for 1980 are based on total marriages. Data from 1985 onwards are based on resident marriages (where either or both the groom and bride are residents).

³ Data for 1980 are based on total grooms/brides and total population. Data from 1985 onwards are based on resident grooms/brides and resident population (i.e. Singapore citizens and permanent residents).

¹ Refers to births with at least one parent who is a Singapore citizen or permanent resident. Data for 1980 and 1985 are estimated.

² Refers to the average number of daughters each female would have during her reproductive years if she were subject to the prevailing age-specific fertility rates in the population in a given year.

³ Refers to the average number of daughters each female would have during her reproductive years if she were subject to the prevailing age-specific fertility and mortality rates in the population in a given year. It is a refinement of the gross reproduction rate, and is also the measure of replacement of population.

Table A4.2 Resident Age-Specific Fertility Rate, 1980 – 2017

Year	Per Thousand Females						
	15 – 19	20 – 24	25 – 29	30 – 34	35 – 39	40 – 44	45 – 49

¹ The Singapore resident population as at June 2003 is used as the standard population which is chosen to fix the age structure to eliminate its effect on mortality trends.

² Prior to 1990, data refer to total population.

³ Refers to the number of deaths of persons under 28 days of age per thousand live-births.

⁴ Refers to the number of still-births and deaths of persons under 7 days of age per thousand live-births and still-births.

⁵ Refers to the number of maternal deaths (i.e. deaths of mothers) per hundred thousand live-births and still-births.

⁶ Refers to the probability of a new-born baby in a specified reference period dying before reaching the age of 5, if subject to age-specific mortality rates of that reference period. This indicator is derived from a life table and expressed as the number of deaths per thousand live-births.

SINGAPORE DEPARTMENT OF STATISTICS

INFORMATION DISSEMINATION SERVICES

Statistics Singapore Website

The *Statistics Singapore Website* was launched by the Singapore Department of Statistics (DOS) in January 1995. Internet users can access the website by connecting to:

<http://www.singstat.gov.sg/>

Key Singapore statistics and resources are available via the following sections:

- **What's New**
Obtain latest data for key economic and social indicators, browse news releases by DOS and Research and Statistics Units (RSUs) of other public sector agencies.
- **Find Data**
Choose from almost 50 topics to access the relevant statistics, press releases, infographics, charts, storyboards, videos and references.
- **Publications**
Browse DOS's publications, papers and articles by topics. All publications are available for free access.
- **Advance Release Calendar**
View dates of upcoming releases in the half-yearly ahead calendar.

The website also provides a convenient gateway to international statistical websites and resources:

- **IMF Dissemination Standards Bulletin Board**
View metadata and latest data about Singapore's key indicators in the real, fiscal, financial and external sectors, including dissemination practices and information about pre-release access of current indicators.
- **International Statistics**
Access international databases, websites of international bodies and national statistical offices.
- **International Classifications**
Access quick links to international economic and social classifications.

SingStat Express

Subscribe to the *SingStat Express* and receive email and SMS alerts (for local users) on the latest press releases, notices of publication, occasional and information papers and, newsletters. Subscription details are available at <https://www.singstat.gov.sg/whats-new/sign-up-for-alerts>.

SingStat Mobile App

The *SingStat Mobile App* provides users with ready access to the latest key Singapore official statistics through their mobile devices while on-the-go. Users may visualise data for the latest periods with some 200 charts of commonly used statistics from 27 data categories. The app is continually enhanced to provide more user-friendly features. Users can now receive notifications on updates to their preferred indicators, organise data categories in the order of their preference, download tables or share charts via social media and perform computation for quick analyses. The app is available for downloading in iOS and Android devices. More information is available at <https://www.singstat.gov.sg/our-services-and-tools/singstat-mobile-app>.

SINGAPORE DEPARTMENT OF STATISTICS INFORMATION DISSEMINATION SERVICES *(cont'd)*

SingStat Table Builder

The *SingStat Table Builder* contains statistical data series on the Singapore economy and population for users to create customised data tables, and export them in different file formats and download multiple tables at one go. APIs are also provided in JSON and CSV formats. Explore data trends with this e-service at <https://www.singstat.gov.sg/tablebuilder>.

Really Simple Syndication

Really Simple Syndication (RSS) is an easy way to stay updated on the latest statistical news released by DOS. The SingStat RSS feed delivers statistical news highlights and hyperlinks to the source documents whenever the updates are posted. More information is available at <https://www.singstat.gov.sg/whats-new/really-simple-syndication-rss>.

E-survey

The *E-survey* enables business organisations to complete and submit their survey forms through the internet. Using secured encryption protocols, the *E-survey* ensures that the information transmitted through the net is secured and protected. The system features online helps and validation checks to assist respondents in completing their survey forms. With the *E-survey*, respondents do away with the tedious paper work and manual tasks of mailing or faxing their survey returns to DOS.

Statistical Enquiries and Feedback

If you have any statistical enquiries or feedback on our services, you are welcomed to:

-  Email us at **info@singstat.gov.sg**
-  Fax to us at **(65) 6332-7689**
-  Call us at **1800-3238118* (local callers)**
(65) 6332-7738 (overseas callers)

* Calls from mobile telephone lines to 1800 local toll free number may be subject to mobile airtime charges as imposed by the relevant mobile service provider.
